Achievements

- Codeforces National Rank:** Ranked **70th in Pakistan** out of thousands of coders on the platform. **2026**
- Algorithmic Streak Consistency:** Maintained a **100+** day streak completing competitive programming challenges daily on Codeforces. **2026**

Professional Experience

Co-Founder & Lead AI Engineer — Remote

Eledra Labs (eledralabs.com), Lahore, Pakistan

Jun 2026 - Present

- Co-founded a development agency and directed the technical architecture for production-ready multi-agent systems for commercial clients.
- Structured scalable backend pipelines to decrease baseline server overhead and optimize internal data processing loops.

AI Engineering Intern — Remote

Spiral Lab, Lahore, Pakistan

Jul 2026 - Sep 2026

- Built automated scraping and ETL data pipelines using n8n, scrapers, and Supabase.
- Developed multi-agent workflows using CrewAI and LangChain with custom tool calling.
- Integrated external tool-use interfaces using the Model Context Protocol (MCP).

AI Engineering Intern — Remote

Bricklix, Darien, IL, USA

Mar 2026 - May 2026

- Built autonomous phone voice assistants using raw audio processing and telephony connection APIs.
- Set up LLM script execution paths to run text data transformations and clean unstructured logs.
- Ran local latency tests on active endpoints to isolate bottle-necks and drop call response lag.

Projects

Production-Grade Voice Agent

Python, Groq, Deepgram, Twilio, WebSockets

[Project Repository](#)

- Developed a full-duplex conversational voice solution designed to automate inbound support calls and user queries.
- Streamed audio via **WebSockets** and **Groq LPU** to hit sub-750ms latency, cutting drop-off by 35%.

Autonomous Clinical Reporter

Python, LangGraph, Pydantic, Gemini API

[Project Repository](#)

- Built a production-grade healthcare engine parsing raw clinical scans into standardized diagnostic reports.
- Engineered **LangGraph** workflows with **Pydantic** schemas, achieving 99.4% clinical data accuracy.

Native RAG Architecture

Python, Mem0, Qdrant, ChromaDB, FastAPI

[Project Repository](#)

- Engineered an enterprise knowledge-retrieval engine that tracks, remembers, and updates complex user preferences.
- Modeled context loops in **Mem0** with **Qdrant** and **ChromaDB**, cutting token consumption by 22%.

LLM Data Analyst Framework

Python, Groq, Pandas, Streamlit

[Project Repository](#)

- Created a BI platform that allows non-technical stakeholders to query raw corporate data using conversational English.
- Built sandboxed **Pandas** compiler with automated error loops that self-corrected 91% of syntax bugs.

Education

B.S. in Computer Science | *NASTP Institute of IT, Lahore, PK*

2025 - 2029 (Expected)

Tools, Platforms & Tech Stack

- Core Fields:** Multi-Agent Layouts, LLM Operations, Live Audio Streaming, Telephony, Text Extraction, Vector Databases, Async Code, REST APIs
- Languages & Protocols:** Python, C++, SQL, JavaScript, WebSockets, REST APIs, JSON Schema
- Frameworks:** LangGraph, CrewAI, Mem0, FastAPI, Pandas, Streamlit, Pydantic, Faster-Whisper
- Systems & Cloud:** Git, GitHub, Linux Shell, Supabase (PostgreSQL), Fly.io, n8n, Qdrant, ChromaDB, Docker
